Dear Ma'am/Sir,

In this letter, I want to let you know how much I wish to apply for the job position of *Data & AI Analyst* at Accenture. Being a diligent student of Information Systems from Ateneo De Naga University, with a GPA of 3.80, I have learned a lot about system modernization and project management. My goal is to make use of my abilities and experience to analyze decisions made through artificial intelligence and develop a reputation for your firm.

Having gained valuable experience during my internship as Business Analyst Intern at the Local Business Initiative, I got to know the functioning of different business organizations in Naga city and search for any modernization they need. Through collaboration with all the related people, we developed our current system, making its implementation for users quite smooth. It feels great to know that the improvements we made made their operations more efficient and profitable.

More of my leadership qualities were put into practice when I took up the role of Project Manager of the Seiki Project Team. In this case, I developed a time management strategy for the student assistants, which was quite effective and efficient in terms of administrative work. Additionally, I tried to implement a laptop borrowing application, which I did right from scratch until its implementation through collaboration between the software developers and the users.

To adapt to the ever-changing environment, I have taken some courses in Artificial Intelligence Literacy provided by the ASEAN Foundation and Supply Chain Management & Capacity Planning offered by Alison. Based on all that was said, I believe I am worthy of an opportunity to discuss how I can further help meet the objectives of your company. All based on the technical knowledge I currently Garner, along with management skills and business experience I have.

Sincerely yours,

ERIC JOSEPH P. GALANG JR.
